

horecasense

The new generation online noise monitoring

As a hospitality business owner, you want to protect your guests and staff against hearing damage, prevent nuisance to the surrounding area and monitor your environmental permit. In the Dutch **fourth covenant on the prevention of hearing damage**, it was agreed that locations with amplified music **actively carry out noise measurements** and, if desired, **make this data (automatically) available** to an authorized third party.

With Horecasense this is easy

You choose an affordable, flexible, reliable and wireless noise measurement system that fully complies with the covenant agreements. The sound values are shown in real time on one or more displays and stored online in a secure environment. Moreover, thanks to the forecast function, the DJ or artist retains the creative freedom to vary within the licensed standards.

Keep an eye on things

With the online platform you can monitor noise levels and receive alarm notifications. You also have graphs and daily reports for the past week, month or year. These are also suitable for government control and sharing with third parties.

Expandable

The Horecasense system can be expanded without any problems. More noise meters, both indoors (model NP8) and outdoors (model NP9), more screens, multiple rooms or multiple locations.

And with the Sound Event app you can transform any Apple or Android tablet into a new screen within the location and manage your location remotely on your smartphone. It goes without saying that Horecasense is easy to install yourself.

horecasense

the new standard for online monitoring of noise levels in the hospitality industry

Horecasense is the simplest and most affordable system

Simple, reliable and flexible

Online portal for remote insight

Current and historical insight

Proven for years to be effective in preventing hearing damage
